

ECONEXT[®]

Adapter ECONEXT[®] roof terminal for heat pump and solar panel cable feed-through

When installing a hybrid heat pump combined with a central heating boiler, a roof vent and an outdoor heat pump unit are typically present. The cables from the outdoor unit usually enter the house through the roof. To solve this as efficiently and simply as possible, Cox Geelen has developed an ingenious adapter that can be added to the ECONEXT[®] roof terminal Ø 60/100 mm.

With the help of this clever and simple adapter, the cables can be effortlessly routed indoors through the roof vent via the air supply pipe.

What's so amazing about it?

It can save two hours or more of installation time and no additional roof penetration is required. The adapter is available under item number **ADPXAA400**.

New:
adapter for heat pump and solar panel
cable feed-through

AJDFAB01
ECONEXT[®] condensing concentric
roof terminal PP/Plastic
black Ø 60/100, length 1301 mm
